

HORDE OF HORRORS

Comprehensive Status & Executive Development Roadmap

PROJECT COMPLETION METRIC

STATUS: 11 / 28 Tasks Finalized (39%)

Horde of Horrors is a portrait-oriented, mobile-first gothic horror wave survival game written in Godot 4.3 GDScript. Development is proceeding along two parallel streams: full-featured game client architecture and an automated Grok chat bridging loop.

Core Pillars:

- Mobile Portrait optimization (touch controls, virtual joystick)
- Fast-paced horde pathfinding AI state loops
- Comprehensive custom pooling framework (PoolManager.gd)

Phase / Category	Task Description	Status	Target / Notes
Active Fixes	Refactor Enemy.gd bat transform scaling transitions	COMPLETED	Scales bat to 0.15 and restores humanoid to 0.55
Active Fixes	Implement HUD container in UIManager.tscn to toggle visibility	COMPLETED	Hides HUD on main/select menus, shows automatically on wave start
Active Fixes	Fix AudioManager.gd startup child node lookups	COMPLETED	Dynamically instantiates players instead of hardcoded paths
Active Fixes	Resolve UpgradeShop node name mismatch in UIManager	COMPLETED	Renamed UpgradePanel instance to UpgradeShop
Foundation	Register new singletons/autoloads in project.godot	COMPLETED	Added UIManager, PoolManager, GameManager, WaveManager
Foundation	Debug and clean up EnemyBase.gd duplicate code	COMPLETED	Restored clean variables and methods
Foundation	Fix invalid .tscn syntax for all 6 enemy scenes	COMPLETED	Rebuilt scenes using valid Godot 4.3 blocks
Foundation	Verify input mapping for dash action	COMPLETED	Shift key bound physically in project settings
Foundation	Connect UpgradeShop.tscn to UIManager.gd	COMPLETED	Integrated upgrade menu logic and overlay triggers
Foundation	Integrate object pooling inside EnemyBase.gd	COMPLETED	Unified return-to-pool calls and reset behaviors
Foundation	Set up the first dynamic level layout folder structure	COMPLETED	Implemented dynamic backdrop swapping in MainGame
Week 1	Implement virtual joystick CanvasLayer (Joystick.tscn)	PENDING	Mobile portrait layout touch movement
Week 1	Implement auto-aim target scanning using Area2D	PENDING	Automatic targeting of nearest active monster

Phase / Category	Task Description	Status	Target / Notes
Week 1	Add player character animated sprite states	PENDING	Walk, idle, fire, dash frame transitions
Week 2	Set up silver crossbow weapon custom Resource parameters	PENDING	Damage, speed, fire-rate balancing templates
Week 2	Integrate projectile pooling using PoolManager	PENDING	Reuses bolts and hit impact particles
Week 2	Improve basic pathfinding/chase logic on EnemyBase.gd	PENDING	Navigation agent setup for smarter pathing
Week 3	Implement detailed Upgrade UI cards in shop	PENDING	Offense, Defense, Utility, and custom Sinister cards
Week 3	Create pickup items dropping on enemy deaths	PENDING	Blood drops, speed boosts, invincibility bubbles
Week 4	Add characters Elias Voss & Serena Nightshade	PENDING	Roster properties and selection transitions
Week 4	Implement Werewolf dash & Vampire bat AI state machines	PENDING	Advanced monster combat actions
Week 4	Build maps for Cathedral, Mansion, and Ruins	PENDING	Dynamic Y-sorted environment layers
Week 5	Add screenshake shader to camera	PENDING	Juice impact reactions on hit
Week 5	Add GPU-based blood particles on death	PENDING	Dynamic death splatters
Week 5	Implement visibility-based processing optimization	PENDING	Pauses AI loops when off-screen
Week 6	Set up JSON serialization for game saves	PENDING	Persistent stats, high-scores, essence
Week 6	Add Victor Van Helsing premium character configuration	PENDING	Premium roster expansion
Week 6	Configure Android and iOS export settings	PENDING	Builds ready for staging/testing
